Galen Medical Journal

We are delighted to announce the new period of publication of “Galen Medical Journal (GMJ)”.

GMJ will focus on novel researches performed by medical students all over the world. No need to say that these studies are inspired supervised and co-written by faculties of medical universities. There has been a growing number of publications and citations from Iranian researchers in recent years.

Our supporting organization, “Student Research Committee of Fasa University of Medical Sciences (SRCFUMS)“, has been one of the most successful counterparts. Members of SRCFUMS have published more than 20 articles in international peer-reviewed journals. (1-4)

It is good but not enough. We aim for novel, goal-directed and problem-solving researches. Manuscripts to be submitted to GMJ, should fulfill a series of intensive criteria including precise methodology, good English and immediate benefits to our readership.

We particularly welcome observational and interventional original studies.

Medical hypotheses section can be a good opportunity to generate brilliant idea.

It should be kept in mind that scientific misconducts such as plagiarism, duplicate publication and salami publication are officially banned in GMJ. Violators may be introduced to the authorities.

Being involved in “Student- based” research for many years have taught us a lot. Ambition, energy and talent should be translated to disciplined and organized projects. We hope to publish High-qualified and well-written papers.
